# RELMONT MILL TO TREAT ORE FOR COMPANY

Development Work Being Pushed With Crosscuts on 800 and 1000 Foot Levels

Beginning November 1 the Tono broke will increase its daily onto from the present average r at tome to be tone daily, with the atio with the development which eing conducted on a scale greate me in the history of The ore will be treat d at the mill of the Tonopah Bell out Development company, which as closed a contract for the entire There will be no hange in the method of delivery, as timics of the Divide company all damp disectly into the ore-bins t the helmont without resorting to

Brougher, president of the Tone carries to join Mrs. Brougher for he tenara trip to their home in Oak-上海市

Mr Brougher has spent the greater the two days of his Tonopal all renewing his acquaintance with underground workings of the to under his control, and he exessed the utmost gratification at e condition of the district

After this I hope to visit Tono sh at least every two months, for and that the people here need ortening and something to sustain heir faith in the mines of Tonopah and the Divide. This is my first isit in a year for reasons that need not be repeated, but I feel my health returning and hope that in the future I will be able to give Tonopah the same personal attention that it lways received from me before my

From what I have heard on all des," resumed the sturdy Tonopah oneer. "I know that neither the loal people nor the outside world as the faintest idea of what the Tunapah Divide mine is, but I am colong to leave that to the future tather than indulge in any predic-There has been enough talk bout the Divide and what the public and mining investors want is some substantial confirmation of what has -- forecast. The Tonopah Divide making rapid progress on both the 800 and 1000-foot levels, where bey are between 60 and 70 feet out of the stations and making rapid progress towards the objective cold which may be roughly stated at 140 feet from the shaft. At least, hat is where the ledge was cut on he upper levels and we see no reaand for expecting anything different a the 300 and 1000 levels. However, must be remembered that great banges may be effected in 500 feet and there is just the possibility that be rake of the ledge may have hanged either by straightening out a slanting off at a great angle does not make much difference what change has occurred in the kenlogy of that section, the vein is there, and it is merely a matter of time until we get the same values that we find above. My reason for this belief is the fact that the formation is identical with small stringers intruding as the cross-cut is advanced. In speaking of cutting the leige on the lower levels it should be borne in mind that we never got values until we advanced some dis-

During his visit Mr. Brougher pent some time on the Midway in empany with Manager W. J. Dougus and says the outlook is perfect-" anti-factory, as the shaft is down to the 1400-foot point and sinking in trackyte, the ere-hearing formation .
